

## EMAC '07

9<sup>th</sup> European Meeting on Ancient Ceramics

24-27 October 2007

Hungarian National Museum, Budapest, Hungary

Pottery is one of the basic sources of archaeological inquiry. Ceramic typology and stylistic study of pottery has been, for long time, the main tool for temporal and spatial ordering, classification of peoples and cultures through the vessels they use.

EMAC is devoted to ceramic studies beyond the form and concerned with the technological characteristics of vessels. Researchers are invited to submit papers to be presented in subjects concerning ceramic technology, provenance of raw materials, decorative techniques, vessel use and function. For the investigation of such questions various methods of scientific analyses are applied ranging from routine laboratory practice to the application of sophisticated analytical techniques. The time allotted for each presentation is 20 minutes, including discussion, introductory and closing arguments. The organisers also welcome poster presentations.

The main topics of the Conference are intended to cover, in accordance with former EMAC practice:

- methodological development in pottery studies
- production, distribution, trade
- dating pottery
- pottery as container
- ceramics as building materials
- industrial/technical ceramics
- ceramics in conservation
- slips and glazes

Considering the special directions of Hungarian ceramic research, a topic will be announced in respect of geological approach to the study of pottery.
